The Surgery Center of Dallas Opens

DALLAS, TX (October 6, 2006). The Surgery Center of Dallas is located in the medical district on Harry Hines Boulevard and Research Row. The 10,000 square foot, fully physician-owned ambulatory surgery center has the look and feel of its well-established neighbor Pine Creek Medical Center. "Together with Dr. Corazon Ramirez (Developer and Chief Operating Officer) we have designed the space to serve patients well by creating a stately, serene environment enabling both patients and healthcare practitioner's ease of process through procedures and subsequent recovery. Contrasting rich wood tones and lighter neutrals hold the space in balance while hosting a tasteful grouping of life-giving hues" says Amy Shacklett of Azimuth: Architecture, Inc.

The \$10M project, with a beautiful lobby finished in muted blues and greens and complete with hardwood floors, welcomes patients and visitors with comfort and style. The facility, featuring 3 state-of-the-art operating rooms and a procedure room, has been specifically designed to accommodate bariatric procedures. There is a growing need for these types of facilities due to an increasing demand of surgical procedures for weight loss management. Although The Surgery Center of Dallas will be bariatric-centric, various other medical services will be offered including Orthopedic and Sports Medicine; Ear, Nose and Throat Surgery; Gynecological services; Pain Management; Podiatric Surgery as well as diagnostic procedures.

The project team includes Azimuth: Architecture, Inc. (architecture and interior design services), MEDCO Construction (general contractor) and Trophy Healthcare Development Company (project management).
